DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

2. Claims 1-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Sato (5,816,680)

3. Sato discloses an indicator lamp defined by a certain angular interval for a motor vehicle, delimited at least on one side corresponding to the inside of the vehicle by a partition running along the lamp over a substantial depth and comprising a light source (14,16), a flux concentrator and/or recuperator element comprising a mirror arranged in the back of a lamp cavity (18) delimited partly by the said partition, and glazing (12) the partition possessing a free edge in the vicinity of the glazing and the flux concentrator and/or recuperator element extending set back with respect to the said free edge of the partition (figs 2 and 5), the lamp possessing a principal emission axis extending

Art Unit: 2875

substantially parallel to the partition, the said lamp further comprising auxiliary optical means comprising an auxiliary reflecting area(26A1-5) situated on the side opposite the said partition with respect to the bulb and able to direct, directly onto the glazing in the vicinity of the partition an auxiliary luminous flux the average direction of which is substantially inclined laterally with respect to the said principal axis of emission characterised in that the said auxiliary reflecting area comprises a segment of axisymmetric paraboloid focused in the vicinity of the source and the axis of which is oriented along the said average direction (Fig 4, 26A1-5)

- The said auxiliary reflecting area is adjacent to the mirror (fig 4).
- The said auxiliary reflecting area is formed on a step discontinuity in a second partition opposite the said partition and at a distance from the mirror (fig 4).
- The said auxiliary reflecting area comprises at least two sub areas able to reflect the light in different average directions and/or with different spreading characteristics (col. 6, lines 35-48).
- That the various sub-areas extend along a row (fig 4).
- The said row extends generally vertically (fig 4).
- The mirror of the lamp is able to spread out the light in horizontal and/or vertical cross-section, and in that the auxiliary reflecting area is able to spread out the light in the corresponding cross-section (col. 6, lines 35-48).
